KAISER CX × Pollup | CASE STUDY

From reactive to scalable.

How Rail-Flow built the foundation for proactive renewals, risk management and AI-assisted Customer Success — without another platform.

CLIENT Rail-Flow GmbH

ENGAGEMENT CS Foundation · 16 weeks

DELIVERED BY Kaiser CX × Pollup AI

THE TRIGGER

~100

customers

1

spreadsheet

0

CS function

Growth exposed a visibility problem.

Customer management was spread across Sales, Implementation and Tech Support. Data lived in a spreadsheet; HubSpot was used for Sales. No renewal process, no reliable health view, no way to prioritise attention.

> **Customer risk was often visible only after the customer was already lost.**

BEFORE → AFTER

What the operating model replaced.

BEFORE		AFTER
Customer data in one spreadsheet	→	Structured CS data in HubSpot
No renewal process	→	Renewal pipeline with automations for CSMs
No health assessment or segmentation	→	Health status (Green/Yellow/Red) + segmentation by potential
Reactive customer management	→	Proactive, prioritised customer management
Manual investigation of risk	→	AI-assisted root cause analysis

THE APPROACH

Four phases. Sixteen weeks.

Wk 1–3	Wk 4–8	Wk 9–14	Wk 15–16

PHASE 1

Discovery

Stakeholder interviews

Process & data analysis

Project scoping

PHASE 2

Structure & Build

CS processes

HubSpot data foundation

Playbooks & templates

PHASE 3

Integration & Validation

AI signal layer (VoC Hub)

CS KPI introduction

CS operating standards

PHASE 4

Handover

Workshops

Final presentation

Sign-off

WHAT WE CHANGED

We built the CS operating layer into HubSpot.

No new platform. Three layers on the stack Rail-Flow already owned.

01

CRM & DATA FOUNDATION

Structured customer data model, renewal pipeline with stage automation, and segmentation by potential.

02

ACCOUNT OVERVIEW

All accounts at a glance — journey stage, health, latest notes, revenue and renewal date. Filterable by segment, risk or owner.

03

AI-ASSISTED INTELLIGENCE

VoC Hub explains what's happening, why, and what to look into next — pulling signals from HubSpot, Jira and usage data.

THE FOUNDATION

AI needs a foundation. We built it first.

FOCUS

Decide where attention goes.

Segmentation by potential, health score, adoption and renewal stage — priorities follow evidence, not the loudest account.

OWNERSHIP

Decide who owns what, and when.

Roles across the lifecycle, clear handovers, a weekly operating rhythm, shared knowledge — quality no longer depends on one person.

DATA & TOOLS

Make the data trustworthy.

CRM standards, data quality rules and integrations of HubSpot, Jira and usage data — what the AI layer reads from.

ROOT CAUSE ANALYSIS

From “Something is wrong” to “This may be why.”

- Usage drops
- Support issues rise
- Communication drops
- Signals change together

→

AI CONNECTS

Tickets, bugs, usage and communication

→

CONTEXT FOR THE CSM

A structured explanation — not another score.

The CSM stays in control. AI provides context and recommendations — the team decides.

THE RESULT

Six concrete outcomes from one foundation.

01

Accurate forecasting

Renewal ARR and probability tracked per deal — forecasts built on data, not spreadsheet estimates.

02

Early churn-risk visibility

Risk surfaces before renewal — with the reason behind it.

03

Early expansion visibility

Growth signals become visible early — evidence, not intuition alone.

04

Focused customer management

CSMs know which accounts need attention — and why.

05

Resource allocation

Segments set the contact frequency — capacity goes where it matters.

06

Product transparency

Product teams see where customers get stuck and which processes are disrupted.

HOW IT REACHES THE TEAM

Not just flags. The context behind them.

01

Your Week

Per CSM, their accounts only. Every critical account comes with a plain-language explanation of what is going wrong — and why it matters.

02

Friday CS Wrap-Up

What changed since last week — renewals, churns, health shifts — each with the reason behind it, not just a red or green flag.

03

VoC Hub, on every deal

Risk and expansion patterns, plus the agent's reasoning: which evidence from tickets, meetings, emails and usage led to the score.

04

Monthly: Product Theme Report

Where customers hit the product: which workflows break, which business processes get disrupted — with the affected accounts and open questions.

05

EBR deck, every 6 months

Prefilled with insights from support and sent to the CSM — the review starts from facts, not a blank slide.

06

Early Adoption Monitor

Tracks adoption after go-live — weak uptake shows up early, not at renewal.

THE OPERATING LOGIC

From customer data to action.

The system doesn’t replace the CSM. It shortens the distance between something happening in the customer base and the team knowing what to do.

THE PRINCIPLE BEHIND THE WORK

Your CS team doesn’t need another platform.

It needs a layer of logic that makes the systems you already own work together.

Curious how this would look for your team? Let’s talk →
